

System Ardentation

Are your systems running at a fraction of their potential?

The IT systems that underpin your business are absolutely vital, yet a large proportion of existing IT systems are operating well below their peak efficiency becoming expensive to run and prone to failure.

Systems dwindle in effectiveness for a variety of reasons. Perhaps architecture changes have impaired performance, perhaps there are bottlenecks in your system. Or you may find that your existing system is not quite up to the task and it's time to invest in an upgrade.

Let ArdentA revitalise your existing systems

Ardentation is a unique ethos that forms a core part of everything we do at ArdentA. Out of this dedication and commitment to doing things just that bit better, we have devised a unique process called System Ardentation. The aim of a System Ardentation programme is to bring your existing systems to a peak of performance and productivity.

We begin by carrying out a detailed health check of your existing IT systems – drawing on our considerable technical expertise. Our team of highly skilled, industry-certified staff will then advise you where improvements are to be made to ensure the optimum efficiency of your systems. If you need to invest in upgrades, we'll advise you on the best course of action for your organisation so you can make an informed decision.

Whatever the problem, and whatever critical systems you're running, an Ardentation programme will breathe new life, efficiency and productivity into them, cutting out waste and significantly increasing their ability to support your business.

Benefit from our years of experience and expertise

Our expertise and understanding in what helps IT systems achieve optimum performance has seen us provide mission-critical support to a range of organisations including:

- Musgrave Budgens Londis • ITV
- MTL Instruments Group PLC

The ArdentA difference – today and tomorrow

ArdentA was founded by two technicians – Neil Truby and Scott Hanson. Neil and Scott continue to work with us today and it is their grass-roots knowledge of the solutions we deliver that has helped us develop a culture of technical expertise and excellence. Through this experience we have gained a thorough understanding of our customers' requirements and how best to serve them.

This helps us to deliver on our mission to ensure that the enterprise information systems that your organisation depends upon are designed, implemented and maintained at optimum levels.

“Our system is mission critical and needs to be up and running 24x7. ArdentA went the extra mile to ensure this was the case, rapidly organising a local, remote place for our new system which required testing whilst we continued smooth running of our operation. During our project, no problem was too great for ArdentA and we were impressed with their attention to detail, commitment and professionalism. We regard ArdentA as a partner we can continue to use to meet our future business requirements.**”**

Andy Wrightson, Head of IT,
Clyde and Co.

System Ardentation

Selecting the right hardware to optimise your systems

Following a System Ardentation programme, you may find that you need additional hardware in order to strengthen your existing system. At ArdentA we have both the equipment and the experience in implementing it, to help ensure the IT systems your organisation depends upon are operating at a peak of efficiency.

Of course should you wish to invest in hardware at any time, regardless of a

System Ardentation programme, we'll be more than happy to help.

We're also an IBM Premier Business Partner, HP Reseller and Cisco Reseller. By bringing all this technical expertise to bear in our hardware sales, we can help ensure you get the best possible solution for your business. We supply and implement the following server hardware:

- IBM • HP • Sun

Company-wide system design specialists

If you're looking for a completely new IT infrastructure that will help your business become more productive, our team of highly skilled, industry-certified staff are vastly experienced in creating enterprise-wide systems that deliver the mission-critical support your business depends on.

So why not get in touch and see how we can help maximise your systems?
